

Art Asset Checklist

Personalized Portfolio Site · everything the build needs from you, the artist

The one golden rule. Any layer that sits *on top of* the room (glows, animated parts, night lighting) must be the **exact same canvas size** as the room base image and exported as a **transparent PNG** (only the object drawn, everything else empty). Follow that and every layer drops in perfectly aligned. Pick your final room canvas size once and reuse it — recommended ~1600 px wide (keeping the current 541×430 proportions → ~1600×1272).

Tier 1 · Core homepage

- ☒ **home_room.png** — the base room illustration. Provided (541×430).
- ☐ **home_room.png** hi-res re-export **OPTIONAL** — same art at ~1600 px wide so it stays crisp full-screen. Drop-in replacement.

Hover glows need no art — the shaped color fills + labels are done in code. Only draw glow art if you ever want a hand-inked glow instead of the flat color.

Tier 2 · Inner page content

- ☐ **portrait.png** — your “me” / self-portrait for the **About** page. Any size; transparent or framed.
- ☐ **Featured Case Study covers** — 3–4 images for the top row of **Projects**. Portrait **3:4** (e.g. 900×1200). `case-1.png`, `case-2.png` ...
- ☐ **Other Design Work thumbnails** — a handful for the lower Projects grid. **4:3** (e.g. 800×600). `work-1.png` ...

Tier 3 · Branding & link previews

- ☐ **favicon.png** — browser-tab icon. Square, **512×512**.
- ☐ **social-share.png** — image shown when your link is shared. **1200×630**.
- ☐ **Brand decisions** (not art) — a font for headings/labels and your accent color(s). Tell me and I’ll wire them in.

Tier 4 · Animated room (fairy lights + swaying curtains)

- ☐ **home_room_base.png** — the room re-exported **with the fairy lights and curtains erased** (added back as moving layers).
- ☐ **lights.png** — just the fairy lights, transparent, full canvas.
- ☐ **curtains.png** — just the curtains, transparent, full canvas.

- ☐ **Frame sets** **OPTIONAL** — 2–4 drawn frames each for hand-drawn “flipbook” motion (curtains-1..4.png , lights-on/dim.png).

Tier 5 • Day / Dusk / Night

The overall day → dusk → night mood shift needs no art — it's a CSS color wash driven by the visitor's local clock.

- ☐ **glow-lamp.png** **OPTIONAL** — warm glow around the desk lamp for dusk/night.
- ☐ **window-night.png** **OPTIONAL** — moon / stars in the window pane.
- ☐ *The fairy lights double as a night accent — they'd switch on after dusk.*

Needed to finish the core site: portrait, case-study covers, work thumbnails, favicon, social-share image, font + color choices.

Needed only for the backlog features: the erased base room + lights + curtains layers (animation), and any night accent glows (day/night).

Send assets whenever they're ready — even one at a time — and I'll wire each in.
